BARRETT M107A1

BY RICHARD LUTZ

MAY 2018

SELF-LOADING ANTI-MATERIAL RIFLE (.50 BMG)

Ronnie Barrett's M107A1 (c. 2003) is a variant of the M82A1 (c. 1982).

The noisy muzzle brake substantially reduces recoil, though the best option would be to fit a Barrett sound suppressor which also reduces recoil and muzzle blast.

The 29" barrel is best as the shorter 22" barrel typically reduces velocity by about 250 fps with standard weight FMJ and AP bullets (more with SLAP rounds with lightweight sub-caliber bullets) and substantially increases muzzle blast and muzzle flash.

A telescopic sight is needed for long range use but are not a replacement for iron sights which are far more robust and

essential for backup use if the scope is damaged.

A tough variable power scope like the Burris noted below is recommended to maximize the effectiveness of this rifle, though a fixed power scope with 6x, 8x or 10x magnification is adequate for most uses. In fixed power scopes we favour one with 6x magnification on the self-loading M107A1 and 10x for the more accurate bolt action Barrett rifles like the M95 (five round magazine) and the less costly single-shot M99.

The reticle on scopes used on these heavy recoiling rifles should either be made of tape or etched onto the glass, not wire that is prone to breaking.

For anti-material use the Raufoss Mk 211 Mod 0 is best (green on white painted tip). This HEIAP round is ideal for use against unarmored and lightly armored vehicles.

The black tip M2 AP round and the silver tip M8 API round with tungsten steel cores are better for sniping as they tend to be more accurate and have better penetration of cover than the Raufoss round.

The high velocity M903 SLAP round with a sub-caliber 7.62mm tungsten bullet in an amber sabot (M962 tracer variant uses a red sabot) has about twice the penetration of the non-SLAP AP rounds but is not as accurate so is unsuited to long range sniping.

SUMMARY OF FINDINGS

Ideal for situations when power and penetration are more important than portability.

RECOMMENDED ACCESSORIES

Log Book

Firearm Usage & Maintenance Log Book. [Blackheart International]

Cleaning Kit

Otis .50 Caliber Rifle Cleaning Kit (FG-250). [Otis]

Cleaner/Lubricant

Slip 2000 725 / Slip 2000 EWL. [Slip 2000]

Broken Shell Extractor

.50 Cal cartridge type broken shell extractor. [SARCO, Inc.]

Dry Fire Rounds

A-Zoom Snap Caps. [Lyman Products Corporation]

Ear Plugs

EarPro EP3 or EP4 Sonic Defenders. [SureFire]

BURRIS 4.5-14X42 FULLFIELD E1 RIFLESCOPE

This scope is double spring tensioned for reliability and has an etched reticle rather than wire that can break under heavy recoil.

It has a focus wheel for parallax adjustment (from 50 yards to infinity) and two reticle

options with the Ballistic Plex E1 and the Long-Range MOA. We favor the later reticle which stays the same size relative to the target no matter what the magnification, which makes rangefinding easier and faster.

It is best fitted via the Burris AR-P.E.P.R Quick-Detach mount so one can quickly replace it with a red dot sight or use the iron sights.

HOT TIP

Training magazines can suffer metal fatigue to their springs so don't use them for combat.
